1 General presentation

1.1 General features

IMAGE is a consortium-based project. Each project partner has his own quality process and organization. The organization and system described in this document will be used only when that makes sense and adds value to other quality systems. For example, document set will have a multi company sourcing and configuration management, but IMAGE deliverable documents must follow recommendations of this Quality Plan.

1.1.1 Quality Plan Objectives

The present Quality Plan describes specific precautions taken and means set by OKTAL in order to master the IMAGE project quality. This document constitutes the statutory reference document useful for any action during the project for the project team.

The OKTAL director's staff engagement in terms of Quality is described in the Quality Assurance Manual

The consortium contributes to the quality assurance of the project by approving the quality requirements and applying the procedures that it is concerned with.

1.1.2 Responsibilities associated with the Quality Plan

OKTAL sets up the Quality Plan in association with Euro Inter who is in charge of the document review.

The consortium approves the document.

1.1.3 OKTAL responsibilities associated with the Quality Plan

OKTAL gets the responsibility to set up the Quality Plan and to make it applied. The Project Quality Engineer (PQE) contributes in its definition and manages the OKTAL project team's awareness. The Chargé d'Affaires (CA) gets the responsibility to set up the Quality Plan and to manage the consortium project team's awareness.

Considering its own Quality System, OKTAL responsibilities associated with the Quality Plan are given into the following table:

Quality Plan	
Activity	Responsible
To set up the Quality Plan	CA PQE
Responsibility and redaction of the Quality Plan	CA
Quality Plan Approval	Project Manager (PM)
Quality Plan application control at OKTAL	CA PQE
